breeding two gray horses that could produce a foal with a higher risk of premature greying. Beyond pedigree charts, the calculators incorporate newer modifiers like the Cream gene, which transforms a chestnut into a palomino or a buckskin, and the Dun gene that adds primitive markings. These nuances, once the domain of specialized textbooks, are now visualized alongside probability charts, letting hobbyists plan colors with confidence. Gather parental genotypes. Records from registries or DNA test results list alleles for Extension (E/e), Agouti (A/a), Cream (C^{cr}/c), and other modifiers. Enter the data. Input fields typically ask for the horse's breed, sex, and specific alleles. Some calculators pre-fill common breeds like Quarter Horse or Arabian, reducing manual entry. Review the results. The output screen shows a table of possible foal colors with percentages, a color swatch preview, and a brief explanation of each genotype's role.
