As early as 1500 BCE, ancient civilizations recognized the importance of mapping the night sky and tracking the movements of the stars and constellations. The sidereal zodiac was first proposed by ancient Greek astronomers, such as Hipparchus and Ptolemy, who sought to create a more precise and accurate system for predicting celestial events. This system was widely adopted throughout the ancient world and remained in use until the modern era. Today, the sidereal zodiac continues to be used by astronomers. The science behind sidereal signs lies in their ability to accurately track the movements of the stars and constellations. Unlike the tropical zodiac, which is based on the seasons, the sidereal zodiac is tied to the actual positions of the stars and constellations in the night sky. This means that the sidereal zodiac is not fixed to a particular date or time, but rather is dynamic and changes over time. As the Earth rotates and the stars shift in the sky, the sidereal zodiac provides a more accurate and consistent.
